"An integral membrane component of coatomer-coated transport vesicles
defines a family of proteins involved in budding.";

Proc. Natl. Acad: Sci. U.S.A. 92:8011-8015(1995).

-I- FUNCTION: Could have a role in the budding of coatomer-coated and
other species of coated vesicles. Could bind cargo.molecules to
collect them into budding vesicles.

-I- SUBUNIT: Interacts with ARFGAP1, inhibiting the GTPase-activating
activity of ARFGAP1 (By similarity).

Could bind cargo molecules to collect them into budding vesicles (By similarity).

SUBUNIT: Interacts with ARFGAP1, inhibiting the GTPase-activating activity of ARFGAP1 (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MGI:1929269; Rnp24

Glucose-1-phosphate adenylyltransferase (EC 2.7.7.27) (AD synthase) (ADP-glucose pyrophosphorylase) (ADPGlc PPase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Q9EUT6;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GLGC_RHITR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gene 150:117-122(1994).

Gene 150:117-122(1994).

-i- CAPALYTIC ACTIVITY: ATP + alpha-D-glucose 1-phosphate - idiphosphate + ADP-glucose.

-i- PATHWAY: Glycogen biosynthesis; first step.

-i- SIMILARITY: BELONGS TO THE BACTERIAL AND PLANTS GLUCOS PHOSPHATE ADENYLYLTRANSFERASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright. DNA Res. 7:331-338(2000).
-!- CATALYTIC ACTIVITY: ATP + alpha-D-glucose 1-phosphate = diphosphate + ADP-glucose.
-!- PATHMAY: Glycogen biosynthesis; first step.
-!- SIMILBAITY: BELONGS TO THE BACTERIAL AND PLANTS GLUCOSE-1-PHOSPHATE ADENYLYLTRANSFERASE FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       08-JUL-1999;
11-JAN-2000;
The invention relates to primers for synthesising full length cDI clones, 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full cDNA are useful for clarifying the function of the protein encode
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention provides novel human T1-receptor ligand III (T1-R ligand III) splice variants and antibodies raised against these proteins. The present sequence represents the T1-R ligand III splice variant Bertant sequence. The T1-R ligand III splice variants are claimed useful for screening agonists and antagonists. They are also claimed useful for treating disorders such as atherosclerosis, autoimmune disease, inflammation, metabolic dysfunction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New human T1-receptor ligand III splice variant(s) - useful for, e.g. detecting and treating immune system related disorders such cancer and inflammation % \left( 1\right) =\left\{ 1\right\} =

                                    ligand III) splice variants and antibodies raised against these proteins. The present sequence represents the T1-R ligand III splice variant 2 protein sequence. The T1-R ligand III splice variants are claimed useful for screening agonists and antagonists. They are also claimed useful for treating disorders such as atherosclerosis, autoimmune disease, inflammation, metabolic dysfunction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                              New human T1-receptor ligand III splice variant(s) e.g. detecting and treating immune system related cancer and inflammation
                                                                                                                                                                                                                                                                                                   28-FEB-1997;
                                                                                                                                                                                                                                                                                                                           26-FEB-1998;
                                                                                                                                                                                                                                                                                                                                                                                                                 Protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Homo sapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human
